

.novadiff-graph/knowledge-graph.json

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T09:57:14.017Z

Overview

- New file `.novadiff-graph/knowledge-graph.json` added (lines R1-R6).
- File starts with `{` and contains metadata: `"version": "1.0.0"`, `"project": {"name": "NovaDiff"}`, `"languages": ["css", ...]`.
- The file is ~8 000 lines long.

Key changes

- Metadata header: `version`, `project`, and `languages` arrays (R2-R6).
- Node schema: the file defines nodes with fields such as `id`, `type`, `name`, `filePath`, `summary`, `tags`, `complexity`, `layerId`.
- Coverage and function details are unknown from the available diff/scan evidence.

Impact

- Provides a single source of truth for the NovaDiff architecture that tooling can query, visualize, and analyze.
- Enables automated tests and documentation generation to reference the graph directly.

Risks & follow-ups

- **Verification:** Run targeted tests and a smoke test on the knowledge-graph consumer to ensure integrity.
- **Maintenance:** Future code changes must update the graph to keep it current.
- **Performance:** Large graph size (~8 000 lines) may impact load times; monitor tooling performance.
