

THIRD_PARTY_NOTICES.md

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T20:58:26.606Z

Overview

A new documentation file `THIRD_PARTY_NOTICES.md` was added to the repository root. It contains a header and a paragraph describing the open-source components used by NovaDiff's knowledge-graph engine.

Key changes

- File added: `THIRD_PARTY_NOTICES.md` (root).
- Header: `# Third-party notices` (line 1).
- First paragraph (lines 2-3) references `packages/graph-core` and `packages/graph-view` and notes that they incorporate MIT-licensed components for Tree-sitter parsing and grammar handling.

Impact

- Provides a static record of third-party licenses for the graph-core and graph-view modules.
- No build or runtime changes; the file is purely documentation.
- The presence of a top-level notice file facilitates license-scanning tools.

Risks & follow-ups

- Verify that all third-party libraries used by `graph-core` and `graph-view` are listed; omissions could affect compliance.
- Confirm that the MIT license attribution matches the actual license files of the referenced components.
- Ensure future dependency updates are reflected in this file; consider automating updates.
