

electron/gh-install.cjs

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T21:10:14.979Z

Overview

A new module `electron/gh-install.cjs` (lines 1-196) adds runtime detection and optional installation of the GitHub CLI (`gh`). It replaces a manual install flow with platform-specific logic.

Key changes

- **Imports:** `spawn` and `spawnSync` from `node:child_process` (R3-R4) and `fssync` from `node:fs` (R4).
- **Path helpers:** `augmentPathForCli` , `resolveGhExecutable` , `isGhInstalled` , `clearGhCache` required from `./gh-path.cjs` (R5-R10).
- `resolveBrew` (lines 15-38) searches common Homebrew paths and falls back to `command -v brew` .
- `getInstallPlan` (lines 40-79) returns an install strategy per OS: Homebrew on macOS, winget on Windows, or a manual hint on other platforms.
- `readGhVersion` (lines 81-94) runs `gh --version` via `spawnSync` to report the installed version.
- `getGhToolingStatus` (lines 96-110) aggregates installation status, path, version, and install plan.
- `runInstallCommand` (lines 116-142) spawns the installer process, streams logs, and clears cache on completion.
- `installGh` (lines 148-190) orchestrates the auto-install flow, validates success, and returns `{ok, path, version}` .
- **Exports:** `GH_FEATURE_REASON` , `getGhToolingStatus` , `installGh` (lines 192-196).

Impact

- Adds detection of `gh` and an automated install path, reducing manual setup.
- Centralizes CLI logic in one module; functions are small and testable.
- Uses `spawnSync` for quick checks; installation uses async `spawn` , keeping UI responsive.
- Explicitly supports macOS (Homebrew) and Windows (winget); Linux falls back to manual instructions.

Risks & follow-ups

- `spawnSync` may block startup; verify timeout handling on slow systems.
- Linux users still need manual install; ensure the manual hint is clear.
- `runInstallCommand` rejects on non-zero exit; callers must handle this.
- `clearGhCache` must correctly reset any cached `gh` state; run integration tests after installation.
