

electron/preload.cjs

Kind: modified · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T18:56:05.758Z

Overview

The `electron/preload.cjs` script now exposes additional IPC-bound APIs for knowledge-graph handling, engine progress, and extended Git/GitHub integration. No existing APIs were removed; the new functions are appended after the existing `onSummaryPrefetchProgress` block (see lines 51-72 and 118-178).

Key changes

- **Knowledge-graph API** (lines 51-72):
 - `buildKnowledgeGraph`, `readKnowledgeGraph`, `readKnowledgeGraphFile` invoke `"knowledge-graph-build"`, `"knowledge-graph-read"`, `"knowledge-graph-read-file"`.
 - `onKnowledgeGraphProgress` registers a listener on `"knowledge-graph-progress"` and returns a cleanup function.
- **Engine progress** (lines 64-71): similar pattern for `"engine-progress"`.
- **Git tooling** (lines 118-127): new helpers (`gitDetectTooling`, `gitRepoStatus`, `gitDiscoverRepos`, etc.) expose `"git-detect-tooling"`, `"git-repo-status"`, etc.
- **GitHub integration** (lines 147-168): progress listeners for `"github-gh-install-progress"` and `"github-auth-progress"`.
- **Workspace history** (lines 170-177): `onWorkspaceHistoryProgress` listens on `"workspace-history-progress"`.

Impact

- **Runtime correctness:** Each new IPC channel requires a corresponding main-process handler; missing handlers will trigger runtime errors.
- **Memory safety:** Every event listener returns a cleanup function; callers must invoke it to avoid leaks.
- **Surface area:** The API surface expands, so documentation and type definitions should be updated.
- **Performance:** Additional listeners add minimal IPC overhead; the impact is negligible for typical usage.

Risks & follow-ups

1. **Missing main-process handlers** – Verify that handlers for `"knowledge-graph-build"`, `"git-detect-tooling"`, etc., exist.
2. **Listener leaks** – Ensure cleanup functions are called when components unmount.
3. **Name collisions** – Confirm that new symbols (`onEngineProgress`, `onWorkspaceHistoryProgress`) do not shadow legacy ones.

4. **Test coverage** – Add unit tests for the new preload functions to guard against IPC regressions.
