

package-lock.json

Kind: modified · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T21:03:02.716Z

Overview

- `package-lock.json` now includes a `workspaces` array pointing to `packages/graph-core` and `packages/graph-view` (added lines R10-13).
- A new top-level dependency `@dagrejs/dagre` (`^2.0.4`) is added (lines R15-24).
- The local package `@novadiff/graph-core` is referenced via `file:packages/graph-core` (lines R15-24).
- Minor adjustments: `develop` removed and `three` reordered (line R49).

Key changes

- **Workspaces** – `workspaces: ["packages/graph-core","packages/graph-view"]` (R10-13).
- **Runtime dependency** – `@dagrejs/dagre` (`^2.0.4`) (R15-24).
- **Local package link** – `@novadiff/graph-core` via `file:packages/graph-core` (R15-24).
- **Lockfile updates** – workspace packages resolved and integrity hashes updated (R56-69, R383-392, R405-419).
- **Dependency cleanup** – `develop` removed and `three` reordered (R49).

Impact

- Enables a monorepo structure, allowing shared dependencies between core and view packages.
- Adds graph layout functionality through `dagre`.
- Local linking ensures consistent core logic across packages.
- The lockfile expands but does not introduce new top-level `node_modules` entries.
- The lockfile now contains additional integrity hashes for the new workspace packages.

Risks & follow-ups

- Run `npm install` and the build/test pipeline to confirm workspace resolution.
- Verify that the local file reference `file:packages/graph-core` resolves correctly.
- Ensure removal of `develop` does not affect development scripts.
- Check integrity hashes for the new entries (R383-392).
- If workspace resolution fails, the build may error due to missing dependencies.
