

packages/graph-core/src/__tests__/change-classifier.test.ts

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T20:04:10.436Z

Overview

A new test file `packages/graph-core/src/__tests__/change-classifier.test.ts` (lines 1-183) was added. It imports `vitest` helpers, `classifyUpdate`, and the `ChangeAnalysis` type, and defines a `makeAnalysis` helper (R5-13) that builds a `ChangeAnalysis` object with empty arrays by default.

Key changes

- **Imports:** `vitest` functions, `classifyUpdate`, and `ChangeAnalysis` (R1-R3).
- **Helper:** `makeAnalysis(overrides?)` returns a `ChangeAnalysis` with default empty arrays and merges any overrides (R5-R13).
- **Test cases** (R17-R183) exercise the decision logic of `classifyUpdate`:
 - SKIP when all files are unchanged or only cosmetic (R18-R40).
 - PARTIAL_UPDATE for a few structural changes plus new files (R42-R57).
 - ARCHITECTURE_UPDATE when >10 structural files, new/deleted directories, or >50 % of the project is structurally changed (R59-R96, R124-R135, R137-R147).
 - FULL_UPDATE for >30 structural files or >50 % of the project (R124-R135, R137-R147).
 - `filesToReanalyze` includes structural and new files but excludes deleted ones (R149-R162).
 - Empty analysis yields SKIP with a "No changes detected" reason (R164-R170).
 - Deleted files count toward the structural total (R172-R182).

Impact

- Adds explicit unit tests for all decision branches of `classifyUpdate`.
- The helper keeps test code concise; changes to the `ChangeAnalysis` shape require minimal updates.
- Test failures will pinpoint the specific decision path that diverges from the expected behavior.

Risks & follow-ups

- Threshold values (10-file, 30-file, 50%) are hard-coded in the tests; if the implementation changes, the tests will fail.
- The logic that determines whether a new file is in a genuinely new directory relies on the `allKnownFiles` list; ensure this list remains accurate.
- No performance regressions are expected, but additional scenarios could increase CI runtime.
