

packages/graph-core/src/__tests__/ignore-filter.test.ts

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T20:07:57.797Z

Overview

A new test suite `packages/graph-core/src/__tests__/ignore-filter.test.ts` (lines R1-R155) has been added. It exercises the `ignore-filter` module, validating default ignore patterns, the filter's behavior without a user file, and its handling of `.novadiffignore` files in both the graph directory and the project root.

Key changes

- **Imports** (R1-R5): Vitest helpers, `createIgnoreFilter`, `DEFAULT_IGNORE_PATTERNS`, and Node fs/path/os utilities.
- **Test setup** (R7-R18): Creates a temporary directory per test, writes a `.novadiff-graph` folder, and cleans up with `rmSync`.
- **Default pattern checks** (R20-R42): Asserts that `DEFAULT_IGNORE_PATTERNS` contains `node_modules/`, `.git/`, `obj/`, `dist/`, `build/`, `out/`, `coverage/` and does not contain `bin/`.
- **Filter behavior tests** (R45-R86): Verify that `createIgnoreFilter` ignores default patterns, lock files, binaries, generated files, and IDE directories.
- **User ignore file tests** (R89-R154):
 - Reads patterns from `/.novadiff-graph/.novadiffignore` and the project root.
 - Handles comments, blank lines, negation (`!dist/`), recursive `**/snapshots/`.
 - Merges both ignore files.
- **Teardown** (R16-R18): Uses `rmSync(testDir, { recursive: true, force: true })` to ensure cleanup.

Impact

- **Correctness**: The tests confirm that the ignore filter honors expected patterns and user overrides.
- **Maintainability**: Future changes to ignore logic or defaults will be caught by the suite.
- **Observability**: Failures surface immediately during test runs.
- **Compatibility**: No API changes; tests rely only on existing exports.

Risks & follow-ups

- **Regression if defaults change**: Modifying `DEFAULT_IGNORE_PATTERNS` will cause failures; review intentional changes.
- **Cleanup reliability**: `rmSync` is invoked in `afterEach`; ensure it runs even on test failures to avoid stale state.
- **Test environment**: Verify Vitest is configured to run these tests; missing configuration could hide failures.

- **Performance:** The suite creates and deletes directories per test; monitor CI runtime for any slowdown.
