

packages/graph-core/src/__tests__/schema.test.ts

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T20:13:34.653Z

Overview

A new test suite `packages/graph-core/src/__tests__/schema.test.ts` has been added to exercise the graph schema validation, sanitization, auto-fix, permissive validation, and support for extended node/edge types.

Key changes

- **New test file** `packages/graph-core/src/__tests__/schema.test.ts` imports `vitest` helpers and the schema utilities from `../schema.js`.
- Tests cover **validation** of required fields, alias normalization, dropping invalid items, and fatal conditions.
- **Sanitization** tests verify null handling, enum lower-casing, and array defaults.
- **Auto-fix** tests confirm defaulting, alias mapping, type coercion, and out-of-range clamping.
- **Permissive validation** tests check node/edge dropping, reference filtering, and error preservation.
- **Extended types** tests assert support for new node types (`config` , `document` , ...) and edge types (`deploys` , `serves` , ...), including alias resolution.

Impact

- **Correctness:** Increases confidence that schema logic handles edge cases and new types.
- **Coverage:** Adds ~730 lines of test code, raising overall test coverage for the graph module.
- **Observability:** Provides detailed failure messages for each validation rule, aiding debugging.
- **Compatibility:** No API changes; only test additions, so runtime behavior remains unchanged.

Risks & follow-ups

- **Test flakiness:** Ensure deterministic timestamps (`analyzedAt`) or mock them to avoid failures.
- **Snapshot updates:** If any snapshot tests exist, run `vitest --update` to refresh them.
- **Alias chain validation:** Verify that `NODE_TYPE_ALIASES` and `EDGE_TYPE_ALIASES` still have no chains; the tests assert this.
- **Performance:** Running ~730 test lines may increase CI time; monitor for regressions in test duration.
