

packages/graph-core/src/__tests__/tour-generator.test.ts

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T20:15:10.766Z

Overview

A new test suite `packages/graph-core/src/__tests__/tour-generator.test.ts` (lines R1-R269) has been added to validate the tour-generation logic.

Key changes

- **Imports added:** `vitest` helpers and the three tour-generator functions `buildTourGenerationPrompt`, `parseTourGenerationResponse`, `generateHeuristicTour` (R1-R6).
- **Sample graph:** a fully-featured `KnowledgeGraph` instance (`sampleGraph`) is constructed inline (R9-R37).
- **Prompt tests:** verify that `buildTourGenerationPrompt` includes project metadata, node summaries, layer names, and requests JSON output (R39-R68).
- **Response-parsing tests:** cover valid JSON, markdown code blocks, unparseable strings, and filtering of incomplete steps (R70-R158).
- **Heuristic-tour tests:** assert entry-point ordering, topological sequencing, concept-node isolation, sequential order numbers, layer grouping, and graceful handling of graphs with no edges or layers (R162-R268).

Impact

- **Correctness:** the suite will surface regressions in prompt construction, response parsing, and tour ordering logic.
- **Coverage:** adds ~270 lines of test code, exercising many branches of the tour-generator module.
- **Maintainability:** the sample graph is self-contained, simplifying future test modifications.
- **Performance:** tests run quickly; no heavy I/O or network calls, so build times should remain unaffected.

Risks & follow-ups

- **API changes:** if the tour-generator signatures or output format change, tests will fail; review the implementation before merging.
- **Snapshot drift:** the tests assert string contents; cosmetic changes to prompts or titles will trigger failures—verify intent before updating.
- **Edge-case coverage:** while many scenarios are covered, rare graph structures may still be untested; consider adding additional edge cases if new features are introduced.
- **Linting & build:** run `npm run lint`, `npm test`, and `npm run build` to ensure the new file does not introduce style or type errors.
