

packages/graph-core/src/analyzer/graph-builder.test.ts

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T19:54:19.558Z

Overview

A new test file `packages/graph-core/src/analyzer/graph-builder.test.ts` (lines 1-404) has been added. It imports `vitest`, `GraphBuilder`, and `StructuralAnalysis` (R1-R3) and exercises the public API of `GraphBuilder`.

Key changes

- **File node creation** – `addFile` is tested to produce nodes with IDs like `file:src/index.ts` (R7-R13).
- **Function & class nodes** – `addFileWithAnalysis` creates nodes for functions (`function:src/service.ts:processData`) and classes (`class:src/service.ts:DataStore`) (R41-R92).
- **Edge generation** – tests confirm `contains`, `imports`, and `calls` edges are added with correct source/target IDs and weights (R95-R178).
- **Project metadata** – the builder sets `name`, `gitCommitHash`, `languages`, `analyzedAt`, `layers`, and `tour` (R180-R203).
- **Language detection** – file extensions (`go`, `rust`, `javascript`) and non-code extensions (`yaml`, `graphql`, `terraform`, `protobuf`) are inferred (R205-R339).
- **Non-code file support** – `addNonCodeFile` and `addNonCodeFileWithAnalysis` create nodes for documents, tables, services, endpoints, resources, and pipeline steps, and generate corresponding `contains` edges (R216-R321).
- **Warning logic** – unknown definition kinds trigger a console warning and default to `concept` (R341-R360); duplicate node IDs are skipped with a warning (R363-R383).
- **Node type usage** – `nodeType` is incorporated into file IDs for contains edges (R386-R402).

Impact

- **Correctness** – the tests validate that `GraphBuilder` handles a wide range of node types and relationships.
- **Maintainability** – any change to the builder's API or internal logic will surface as test failures.
- **Observability** – warnings for unknown kinds and duplicate IDs are explicitly asserted, ensuring predictable console output.

Risks & follow-ups

- **Regression risk** – modifications to `GraphBuilder` may break multiple tests; run the full suite after refactors.
- **Console warnings** – ensure `console.warn` is not suppressed elsewhere, as tests spy on it.

- **CI load** – the expanded test suite may increase execution time; monitor and consider parallelization if necessary.
