

packages/graph-view/index.html

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T19:17:08.422Z

Overview

A new `packages/graph-view/index.html` file has been added (lines R1-R19). It establishes a minimal HTML5 page that loads Google Fonts, mounts a React app, and links a favicon.

Key changes

- **File addition:** `packages/graph-view/index.html` now exists.
- **Meta tags:** `charset="UTF-8"`, `viewport="width=device-width, initial-scale=1.0"`, and a favicon link to `/favicon.svg`.
- **Font preconnects:** `<link rel="preconnect" href="https://fonts.googleapis.com">` and `<link rel="preconnect" href="https://fonts.gstatic.com" crossorigin>`.
- **Font stylesheet:** loads `DM Serif Display`, `Inter`, and `JetBrains Mono` with `display=swap`.
- **Root element:** `<div id="root"></div>` for React rendering.
- **Script entry:** `<script type="module" src="/src/main.tsx"></script>`.

Impact

- Provides a clean bootstrap for the graph-view package.
- Centralizes meta and script configuration, simplifying future edits.
- Preconnects to Google Fonts may reduce font-loading latency (common practice).

Risks & follow-ups

- **Asset paths:** Verify that `/favicon.svg` and `/src/main.tsx` resolve correctly in the deployed environment.
- **Font availability:** Ensure the specified families are accessible and that `display=swap` behaves as expected.
- **Server routing:** Confirm that the server serves this file for the `/graph-view` route and that no other route conflicts occur.
- **Build pipeline:** Check that the new file is included in the build artifacts and copied to the correct output directory.
