

packages/graph-view/package.json

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T19:18:02.519Z

Overview

- A new package `@novadiff/graph-view` was added under `packages/graph-view`.
- The added file `packages/graph-view/package.json` contains 47 new lines (R1-47).
- It declares the package name, marks it `private`, sets version `0.1.0`, and uses `"type": "module"`.

Key changes

- **Exports** (lines 6-9):
 - `"."` → `./src/index.ts`
 - `"./styles.css"` → `./src/index.css`
- **Scripts** (lines 10-16):
 - `dev`, `build`, `build:demo`, `preview`, `test`, `test:watch` – all invoke Vite, TypeScript, or Vitest.
- **Dependencies** (lines 18-33): includes `@dagrejs/dagre`, `@novadiff/graph-core` (`file:../graph-core`), `@xyflow/react`, `d3-force`, `elkjs`, `graphology`, `graphology-communities-louvain`, `graphology-types`, `hast-util-to-jsx-runtime`, `prism-react-renderer`, `react`, `react-dom`, `react-markdown`, `zustand`.
- **DevDependencies** (lines 35-46): Tailwind, TypeScript, Vite, Vitest, and related plugins.

Impact

- The monorepo build must now resolve and compile `graph-view`.
- Tests for this package use Vitest; coverage is enabled via `@vitest/coverage-v8`.
- The local reference `file:../graph-core` creates a tight coupling; changes to `graph-core` may affect this package.
- Importing `@novadiff/graph-view` will expose the TS entry point and CSS file as defined in the exports.

Risks & follow-ups

- **Dependency resolution** – verify that `file:../graph-core` resolves in CI; missing symlinks could break installation.
