

packages/graph-view/src/components/DomainClusterNode.tsx

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T20:19:42.236Z

Overview

A new `DomainClusterNode` component is added to `packages/graph-view/src/components/DomainClusterNode.tsx`.

It introduces a typed data contract (`DomainClusterData`), a node alias (`DomainClusterFlowNode`), and memoized rendering logic.

Key changes

- **Imports** (lines 1-4):

```
``ts import { memo } from "react"; import { Handle, Position } from "@xyflow/react"; import type { Node, NodeProps } from "@xyflow/react"; import { useDashboardStore } from "../store";
```

– **Data contract** (lines 6-13):

```
ts export interface DomainClusterData extends Record<string, unknown> { label: string; summary: string; entities?: string[]; flowCount: number; businessRules?: string[]; domainId: string; }
```

– **Node type** (line 15):

```
ts export type DomainClusterFlowNode = Node<DomainClusterData, "domain-cluster">;
```

– **Component** (lines 17-64): uses `useDashboardStore` hooks for navigation, selection, and state; renders handles, label, summary, an entity list (truncated to 5 items), and a flow-count label with pluralization.

- **Export** (line 66):

```
export default memo(DomainClusterNode);
```

Impact

- The component is now available for use in the graph view; it expects a `DomainClusterFlowNode` prop.
- It relies on `useDashboardStore` for `navigateToDomain`, `selectNode`, and `selectedNodeId`.
- Memoization (`React.memo`) limits re-renders when props are unchanged.

Risks & follow-ups

- **Store integration:** Verify that `navigateToDomain`, `selectNode`, and `selectedNodeId` exist in the store; missing keys will cause runtime errors.
- **Data validation:** `data.entities` is optional; the component guards against `undefined` before slicing.
- **Pluralization logic:** Test `flowCount` values 0, 1, >1 to ensure correct label rendering.
- **Styling:** Confirm that CSS classes (`border-accent`, `bg-accent/10`, etc.) render correctly across themes.
