

packages/graph-view/src/components/ExplainCodeModal.tsx

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T20:20:49.697Z

Overview

A new `ExplainCodeModal` component is added at

`packages/graph-view/src/components/ExplainCodeModal.tsx` (lines R1-116).

It renders a modal dialog that shows explanatory Markdown text, a loading indicator, error messages, and an optional saved hint.

Key changes

- **Imports** – `useEffect`, `useRef` from `React` and `ReactMarkdown` from `react-markdown` are added (R1-R2).
- **Props interface** – `ExplainCodeModalProps` (R4-R13) defines `open`, `title`, `subtitle?`, `text`, `loading`, `error`, `savedHint?`, and `onClose`.
- **Component logic** –
 - `bodyRef` (R25) auto-scrolls to the bottom when `open` and `loading` are true (R27-R36).
 - A global `keydown` listener closes the modal on `Escape` when not loading (R38-R49).
 - Conditional rendering: returns `null` when `!open`; otherwise renders backdrop, header, body, and footer (R51-R114).
 - Body displays an error paragraph, Markdown via `<ReactMarkdown>{text}</ReactMarkdown>`, a streaming caret when `loading`, or a placeholder (R88-R100).
 - Footer shows `savedHint` and a "Done" button disabled while loading (R103-R111).
- **Accessibility** – backdrop has `role="dialog"`, `aria-modal="true"`, and `aria-labelledby="explain-code-title"` (R57-R60).

Impact

- **Self-contained** – no existing components are modified.
- **Typed API** – all props are explicitly typed.
- **Performance** – two lightweight `useEffect` hooks; scroll logic runs only when needed.
- **Bundle size** – introduces `react-markdown`; ensure it is listed in `package.json`.
- **User feedback** – loading indicator and error messages are visible.

Risks & follow-ups

- **Dependency** – verify `react-markdown` and its types are installed.
- **CSS classes** – confirm that classes such as `novadiff-explain-modal-backdrop` exist; otherwise styling will fail.
- **Event cleanup** – the `keydown` listener is removed on unmount (R48); confirm no leaks.
- **Accessibility** – test focus trapping and that `aria-labelledby` correctly references the title.
