

packages/graph-view/src/components/FlowNode.tsx

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T20:24:11.744Z

Overview

A new `FlowNode` component is added to `packages/graph-view/src/components/FlowNode.tsx` (lines 17-52). It renders a node with left/right handles, displays entry point, label, summary, and step count, and highlights when the node is selected.

Key changes

- **Imports:** added `memo` from React (R1), `Handle` & `Position` from `@xyflow/react` (R2), type imports `Node` & `NodeProps` (R3), and `useDashboardStore` from the local store (R4).
- **Data contract:** defined `FlowNodeData` interface (lines 6-13, R6-R13) with `label`, `summary`, optional `entryPoint` / `entryType`, `stepCount`, and `flowId`.
- **Node type:** introduced `FlowFlowNode` alias for `Node<FlowNodeData, "flow-node">` (R15).
- **Component:** `FlowNode` (lines 17-51) uses `useDashboardStore` selectors `selectNode` and `selectedNodeId`, applies conditional styling, and renders `Handle` components.
- **Export:** default export is `memo(FlowNode)` (R52).

Impact

- Adds a distinct node type without modifying existing graph logic.
- Memoization via `React.memo` should reduce unnecessary re-renders.
- Relies on existing `useDashboardStore` selectors, keeping consistency with the dashboard state.

Risks & follow-ups

- **Data integrity:** unknown from the available diff/scan evidence whether all `FlowNodeData` fields are supplied by the graph state.
- **Store selectors:** unknown from the available diff/scan evidence if `selectNode` and `selectedNodeId` are correctly typed and available.
- **Handle rendering:** unknown from the available diff/scan evidence whether the `Handle` components interfere with other node types or layout.
- **Memoization correctness:** unknown from the available diff/scan evidence whether prop changes trigger re-renders as expected.
