

packages/graph-view/src/components/KeyboardShortcutsHelp.tsx

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T20:24:55.454Z

Overview

A new component `KeyboardShortcutsHelp` is added to `packages/graph-view/src/components/KeyboardShortcutsHelp.tsx`. It renders a modal dialog that lists keyboard shortcuts grouped by category, with `i18n` support and a close handler.

Key changes

- **Imports** (lines 1-3): `KeyboardShortcut` type, `formatShortcutKey`, and `useI18n`.
- **Props interface** (lines 5-7): `shortcuts: KeyboardShortcut[]` and `onClose: () => void`.
- **Export** (lines 10-13): `export default function KeyboardShortcutsHelp`.
- **i18n usage** (line 14): `const { t } = useI18n();`.
- **Shortcut grouping** (lines 16-23): `shortcuts.reduce` builds `groupedShortcuts`.
- **Category translations** (lines 25-31): `categoryTranslations` maps "General", "Navigation", "Tour", "View" to `t.keyboardShortcuts.*`.
- **Modal markup** (lines 33-104): overlay, header, list, footer, close button, and click-to-close handling.
- **Shortcut rendering** (lines 80-88): each shortcut shows `shortcut.description` and a formatted key via `formatShortcutKey`.

Impact

- **Typed API**: Props are fully typed, reducing runtime type errors.
- **Centralized UI**: Shortcut rendering logic is isolated; adding a new shortcut only requires updating the `shortcuts` prop passed to the component.
- **No breaking changes**: Existing components are unaffected; the new file is independent.

Risks & follow-ups

- **i18n keys**: Verify that `t.keyboardShortcuts.general`, `navigation`, `tour`, `view`, `title`, `toggleHint`, and `closeHint` exist in all locales; missing keys will render `undefined`.
- **Overlay click**: Ensure parent components wire `onClose` correctly; otherwise the modal may not dismiss.
- **Styling utilities**: The component uses Tailwind classes `glass` and `glass-heavy`; confirm these utilities are defined in the theme.
- **Accessibility**: No ARIA roles are added; consider adding `role="dialog"` and `aria-modal="true"` for screen readers.
