

packages/graph-view/src/components/LayerClusterNode.tsx

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T20:26:02.955Z

Overview

A new component `LayerClusterNode` is added at `packages/graph-view/src/components/LayerClusterNode.tsx` (lines 1-104). It defines a typed XYFlow node, maps complexity levels to Tailwind classes, and renders a card with source/target handles.

Key changes

- **Imports** (R1-R4): `memo` from `react`; `Handle`, `Position` from `@xyflow/react`; type imports `NodeProps`, `Node`; and `getLayerColor` from `./LayerLegend`.
- **Color mapping** (R6-R10): `complexityColors` records `"simple"`, `"moderate"`, `"complex"` → Tailwind classes.
- **Data contract** (R12-R21): `export interface LayerClusterData` lists `layerId`, `layerName`, `layerDescription`, `fileCount`, `aggregateComplexity`, `layerColorIndex`, optional `searchMatchCount`, and `onDrillIn`.
- **Node type** (R23): `export type LayerClusterFlowNode = Node<LayerClusterData, "layer-cluster">;`.
- **Component** (R25-R103): `function LayerClusterNode({ data }: NodeProps<LayerClusterFlowNode>)` renders a styled card with a left color bar, handles, header, name, description, file count, and optional match badge.
- **Export** (R104): `export default memo(LayerClusterNode);` memoizes the component.

Impact

- **Type safety**: The interface enforces the payload shape for `"layer-cluster"` nodes.
- **Visual consistency**: `getLayerColor` and `complexityColors` centralize styling.
- **Performance**: Memoization limits re-renders in large graphs.
- **Integration**: The new node type must be registered in the XYFlow instance; otherwise it will not appear.

Risks & follow-ups

- `getLayerColor` is assumed to return an object with a `label` property; if not, the left bar will break.
- `data.aggregateComplexity` should match a key in `complexityColors`; otherwise the fallback to `"simple"` may hide mismatches.
- Verify that `"layer-cluster"` is registered in the graph configuration.
- Run graph-view tests to ensure layout and interaction remain correct after adding handles and memoization.
