

packages/graph-view/src/components/MobileBottomNav.tsx

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T20:28:12.399Z

Overview

A new file `packages/graph-view/src/components/MobileBottomNav.tsx` (lines 1-71) introduces a mobile-only bottom navigation component. It exports a `MobileTab` type, a `Props` interface, and a default function `MobileBottomNav`.

Key changes

- **Imports** – `ReactNode` from `*react`
- and `useI18n` from `../contexts/I18nContext` are added (R1-R2).
- **Types** – `export type MobileTab = "graph" | "info" | "files"` (R4) and `interface Props` with `activeTab` and `onTabChange` (R6-R8).
- **Icon mapping** – `tabIcons` holds SVGs for each tab (R11-R35).
- **Order & labels** – `tabOrder` array and `labels` record use `t.mobile.*` keys (R37-R45).
- **Component** – `MobileBottomNav` renders a `<nav>` with three buttons, applying active styling and an underline indicator (R39-R71).
- **Accessibility** – `aria-current="page"` is set on the active button.

Impact

- **UI** – Adds a mobile-specific navigation bar; must be imported where mobile routing is handled.
- **Internationalization** – Requires `t.mobile.graph`, `t.mobile.info`, and `t.mobile.files`; missing keys will result in empty labels.
- **Styling** – Uses Tailwind classes; ensure the theme provides `bg-surface`, `border-border-subtle`, `text-accent`, etc.

Risks & follow-ups

- The component depends on the `I18nContext`; if the context is not provided, `useI18n()` will throw.
- No tests are added for this component; consider adding unit tests for rendering and interaction.
- Verify that the SVG icons render correctly on target devices; potential layout issues if the icon size changes.
