

packages/graph-view/src/components/PathFinderModal.tsx

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T20:31:19.644Z

Overview

A new `PathFinderModal` component is added at `packages/graph-view/src/components/PathFinderModal.tsx`. It renders a modal that lets users select two nodes and find the shortest dependency path between them.

Key changes

- **Imports** (lines 1-2): `useEffect`, `useRef`, `useState` from React and `useDashboardStore` from the local store.
- **Props interface** (lines 4-7): `PathFinderModalProps` with `isOpen: boolean` and `onClose: () => void`.
- **Export** (line 9): `export default function PathFinderModal({ isOpen, onClose }: PathFinderModalProps)`.
- **State & refs** (lines 12-16): `fromNodeId`, `toNodeId`, `path`, `searching`, and `modalRef`.
- **Event handling** (lines 18-30 & 32-44): `useEffect` hooks close the modal on outside clicks or Escape key presses.
- **Path finding** (lines 51-101): BFS that builds a bidirectional adjacency list from `graph.edges` (lines 60-72) and returns the shortest path or an empty array.
- **UI** (lines 110-309): node selectors, "Find Path" button, and a result section that shows either "No path found" or the found path with clickable node buttons.
- **Store usage** (lines 10-11): accesses `graph` and `selectNode` via `useDashboardStore`.

Impact

- Adds a dependency-path finder UI; no existing components are altered, so no breaking changes.
- All logic resides in a single file and relies on the existing `useDashboardStore` hook, keeping the codebase consistent.
- The modal's open/close state is controlled via props, facilitating integration and testing.

Risks & follow-ups

- **Performance**: unknown from the available diff/scan evidence whether BFS on large graphs may block the UI.
- **Accessibility**: unknown from the available diff/scan evidence whether focus trapping or Escape handling conflicts with other shortcuts.
- **Store integration**: ensure `useDashboardStore` provides `graph` and `selectNode`; run unit tests for the hook.

- **UI correctness:** verify that the “No path found” message appears only when appropriate and that node buttons correctly trigger `selectNode` and close the modal.
