

packages/graph-view/src/components/PersonaSelector.tsx

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T20:31:49.864Z

Overview

A new component `PersonaSelector` is added at

`packages/graph-view/src/components/PersonaSelector.tsx` (lines R1-R46).

It renders a button group that lets the user pick a persona, using the global dashboard store and the `i18n` context.

Key changes

- **Imports** (R1-R3) `` `ts import { useDashboardStore } from "../store"; import { useI18n } from "../contexts/I18nContext"; import type { Persona } from "../store";`

```
`export default function PersonaSelector() { ... }`  
- State hooks (R6-R7) `` `ts  
const persona = useDashboardStore((s) => s.persona);  
  const setPersona = useDashboardStore((s) => s.setPersona);  
`` - i18n (R8)  
  `const { t } = useI18n();`  
- Persona list (R10-R26) – an array of `{ id, label, description }` objects  
  whose strings come from `t.personaSelector.*`.  
- Render (R28-R45) – a flex container of buttons that highlight the active  
  persona and call `setPersona` on click.
```

Impact

- **UI**: Adds a persona selector bar to the graph view.
- **State**: Depends on `persona` and `setPersona` in the dashboard store; if these keys are missing the component will error.
- **Internationalization**: Requires the translation keys
 `personaSelector.overview`, `overviewDesc`, `learn`, `learnDesc`,
 `deepDive`, `deepDiveDesc`.
- **Re-rendering**: The component re-renders on any store change; acceptable for a small UI element but should be monitored if store updates become frequent.
- **Testing**: No tests exist yet; future tests should cover rendering, click behavior, and `i18n` integration.

Risks & follow-ups

- **Store contract**: Verify that `useDashboardStore` exposes `persona` and `setPersona`. If not, the component will fail.
- **Translation keys**: Ensure all referenced keys exist in the `i18n` bundles; otherwise fallback text will appear.
- **Usage**: It is unknown from the diff whether the component is imported and rendered in a parent; if not, it remains unused.

- ****Lint & build****: Run ``npm run lint``, ``npm test``, and ``npm run build`` to catch any TypeScript or import errors introduced by this file.
