

packages/graph-view/src/index.ts

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T19:35:26.529Z

Overview

A new entry point file `packages/graph-view/src/index.ts` was added. It re-exports the `NovaDiffGraphExplorer` component and its related types from `./NovaDiffGraphExplorer`.

Key changes

- Exported component: `export { NovaDiffGraphExplorer } from " ./NovaDiffGraphExplorer";` (lines 1-1)
- Exported types: `export type { NovaDiffGraphExplorerProps, NovaDiffGraphDiffOverlay } from " ./NovaDiffGraphExplorer";` (lines 2-5)

Impact

- Public API: Consumers can import `NovaDiffGraphExplorer`, `NovaDiffGraphExplorerProps`, and `NovaDiffGraphDiffOverlay` directly from the graph-view package.
- Type safety: The type exports provide compile-time checks and IDE autocompletion for the component's props and overlay.
- Runtime: No functional changes; the file only re-exports existing symbols.
- Build: The new file will be part of the TypeScript compilation and bundled output.

Risks & follow-ups

- Verify that the exported names do not collide with existing exports in the package.
- Update documentation (README, API docs) to reflect the new exports.
- Add tests that import the component via the new entry point to confirm the re-export works.
- Confirm that bundlers correctly tree-shake unused exports; no unintended side effects are expected.
