

packages/graph-view/src/locales/en.ts

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T19:51:29.549Z

Overview

Adds a new English locale file for the graph-view component. The file is located at `packages/graph-view/src/locales/en.ts` and defines a constant `en` containing UI strings grouped into sections such as `common`, ``project`

Overview

`, nodeInfo`, etc.`

Key changes

- New file `packages/graph-view/src/locales/en.ts` added.
- Lines 1-272 contain the `en` object; line 272 exports it as default (`export default en;`).
- The object holds roughly 270 string entries covering all UI text used in graph-view.

Impact

- No existing files are modified; the change is additive.
- Components that import `en` can display English text, enabling i18n support.
- The added strings will be compiled into the bundle; the size impact is minimal.

Risks & follow-ups

- **Import consistency:** verify that components needing the locale import `en` correctly; missing imports will cause runtime errors.
- **Build inclusion:** ensure the new file is included in the TypeScript compilation and bundled output.
- **Default vs. named export:** confirm consuming code uses the default export where appropriate.
- **Key coverage:** run i18n tests to confirm all UI elements reference existing keys and that no duplicate keys exist.
