

packages/graph-view/src/locales/ja.ts

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T19:52:29.767Z

Overview

Adds a Japanese locale file for the graph-view component, enabling UI text in Japanese.

Key changes

- New file **packages/graph-view/src/locales/ja.ts** added.
- Lines 1–272 contain `export const ja = { ... }` with nested translation objects (`common` , ``project`

Overview

`, nodeInfo`, etc.).`

- Line 272 ends with `export default ja; .`

Impact

- The application can display Japanese text when the locale is set to `ja` .
- Only string data is added; runtime impact is minimal.
- No existing source files are modified.

Risks & follow-ups

- Verify that the i18n loader imports and registers the `ja` locale so keys resolve.
- Ensure every UI key used in the application exists in this file; missing keys will fall back to defaults.
- Confirm the file is included in the TypeScript compilation and bundled output.
- Run UI tests with the locale set to Japanese to validate that all strings render correctly.
