

packages/graph-view/src/locales/ko.ts

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T19:52:51.266Z

Overview

A new locale file `packages/graph-view/src/locales/ko.ts` has been added. It defines a constant `ko` containing ~272 Korean translation strings and exports it as the default.

Key changes

- **File added:** `packages/graph-view/src/locales/ko.ts` (lines 1-272).
- **Exported constant:** `export const ko = { ... };` at line 1.
- **Default export:** `export default ko;` at line 272.
- No existing files were modified.

Impact

- **Internationalization:** Korean language support is now available for the graph-view component.
- **Build:** The file will be bundled automatically; no script changes are required.
- **Testing:** Tests that iterate over all locales may need to include the new `ko` locale.
- **Documentation:** References to available locales should list Korean.

Risks & follow-ups

- **Key consistency:** Verify that every key in `ko` matches the UI's expected keys; missing keys could trigger fallbacks.
- **Locale registration:** Ensure the application's locale loader imports and registers `ko` (unknown from the available diff/scan evidence).
- **Test coverage:** Add or update tests to confirm Korean strings render correctly (unknown from the available diff/scan evidence).
- **Bundle size:** Adding a large locale file increases bundle size; monitor load times for users who never use Korean.
