

packages/graph-view/src/locales/zh-TW.ts

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T19:53:19.796Z

Overview

A new locale file `packages/graph-view/src/locales/zh-TW.ts` has been added.

It defines Traditional Chinese translations for the graph-view UI, with an export of the locale object and a default export.

Key changes

- **Export declaration** – `export const zhTW = { ... }` (added at line 1).
- **Default export** – `export default zhTW;` (added at line 272).
- **Translation coverage** – The object contains sections such as `common`, ``project`

Overview

`, nodeInfo , fileExplorer , filterPanel , personaSelector , sidebar , mobile , drawer , domainView , detailLevel , nodeTypeLabels , tokenGate , diffToggle , learnPanel , layer , breadcrumb , warningBanner , themePicker , codeViewer , customNode , ariaLabels , nodeTypeFilter , keyboardShortcuts , search , export , edgeLabels , pathFinder`.`

- No other files were modified; the diff consists solely of this new file.

Impact

- **Feature** – Enables the graph-view UI to be displayed in Traditional Chinese once the locale is registered.
- **Integration** – The locale must be added to the i18n registry; otherwise it will not appear as an option.
- **Build** – Adding a TypeScript file increases the bundle size by a few kilobytes (exact size unknown from the diff).
- **Testing** – Unit tests that load locales should include `zhTW` to verify that all keys are present.

Risks & follow-ups

- **Missing registration** – If `zhTW` is not added to the locale registry, the UI will default to another language. (unknown from the available diff/scan evidence)
- **Translation accuracy** – Manual review of key strings (e.g., `noGraphLoaded` , `focus` , `edgeLabels`) is recommended to ensure correctness.
- **Edge-label consistency** – The nested `imports` , `exports` , etc., must match existing edge-label keys; a mismatch could break rendering. (unknown from the available diff/scan evidence)

- **Build lint** – Run `npm run lint` and `npm run build` to confirm the new file passes TypeScript checks. (unknown from the available diff/scan evidence)
