

packages/graph-view/src/locales/zh.ts

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T19:53:45.746Z

Overview

A new locale file `packages/graph-view/src/locales/zh.ts` has been added.

It declares `export const zh = { ... }` (lines 1-270) and exports the object as the module's default (`export default zh;` at line 272).

Key changes

- **File addition:** `packages/graph-view/src/locales/zh.ts` now exists.
- **Exported constant:** `zh` contains ~270 key/value pairs for UI strings (common, projectOverview, nodeInfo, etc.).
- **Default export:** `export default zh;` (line 272).
- **No other files modified.**

Impact

- **Internationalization:** Provides Chinese translations for the graph-view UI.
- **Build size:** Adds a small JSON-like data block; impact is negligible.
- **Testing:** Existing locale imports will resolve to this file; tests should verify that all keys render correctly.
- **Documentation:** No README or docs were updated.

Risks & follow-ups

- **Import usage:** Verify components import the locale correctly (`import zh from './locales/zh'`).
- **Key consistency:** Ensure no duplicate or misspelled keys that could break rendering.
- **Fallback behavior:** Confirm the app falls back to English when a key is missing in `zh`.
- **Build pipeline:** Run lint, tests, and production build to catch syntax or export issues.
