

packages/graph-view/src/store.ts

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T19:37:07.805Z

Overview

A new `store.ts` file was added to `packages/graph-view/src`.

It introduces a Zustand store (`useDashboardStore`) that holds the entire graph-view state, along with a set of exported types and helper functions.

Key changes

- **Imports (lines 1-10)** – `create` from `zustand`, `SearchEngine`, `SearchResult`, `GraphIssue`, `GraphNode`, `KnowledgeGraph`, `TourStep`, and `ReactFlowInstance`.
- **Exported types (lines 12-17)** – `Persona`, `NavigationLevel`, `NodeType`, `Complexity`, `EdgeCategory`, `ViewMode`, `DetailLevel`.
- **DashboardStore interface (lines 100-243)** – defines all state fields and action signatures.
- **Helper functions**
 - `buildGraphIndexes` (lines 74-95) builds `nodesById`, `nodeIdToLayerId`, and `nodeIdToLayerIds`.
 - `getSortedTour` (lines 244-247) sorts tour steps.
 - `navigateTourToLayer` (lines 250-263) returns `{ navigationLevel, activeLayerId }` when a node ID is found.
 - `layerResetIfChanged` (lines 274-289) clears layout caches when `activeLayerId` changes.
- **Store implementation (lines 291-823)** – wires all actions, initializes state, and updates indexes on `setGraph`.

Impact

- **State centralisation** – all UI components now read/write through a single store, reducing duplication.
- **Index consistency** – `buildGraphIndexes` guarantees that navigation and filtering use the same node-to-layer maps.
- **Cache hygiene** – `layerResetIfChanged` ensures stale layout data is purged when the active layer changes.
- **Performance** – indexes are rebuilt on every `setGraph`; this is
