

## packages/graph-view/src/themes/presets.ts

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T19:49:36.049Z

### Overview

`packages/graph-view/src/themes/presets.ts` is a new module that defines theme data and helper functions. The file adds imports, two accent swatch arrays, a preset collection, and lookup utilities.

### Key changes

- **File added:** `packages/graph-view/src/themes/presets.ts` (lines 1-183).
- **Imports:** `import type { AccentSwatch, ThemePreset } from "../types.ts";` (line 1).
- **Accent swatches:**
  - `DARK_ACCENT_SWATCHES` (lines 3-12).
  - `LIGHT_ACCENT_SWATCHES` (lines 14-23).
- **Preset collection:** `export const PRESETS: ThemePreset[] = [...]` (lines 25-171) contains dark and light presets with color palettes.
- **Lookup helpers:**
  - `export function getPreset(id: string)` (lines 173-175) returns the preset matching `id` or the first preset if none match.
  - `export function getAccent(preset, accentId)` (lines 177-183) returns an accent swatch by `accentId`, falling back to the preset's default or the first swatch.

### Impact

- **Deterministic fallback:** Both helpers guarantee a return value, preventing `undefined` results.
- **Centralized data:** All theme definitions live in a single array, simplifying future additions.
- **Linear lookup:** Uses `Array.find`, which is acceptable for the small preset set shown.

### Risks & follow-ups

- **Duplicate IDs:** The code does not check for duplicate `id` values; duplicates could cause unexpected fallbacks.
- **Test coverage:** No tests are present for `getPreset` or `getAccent`; adding unit tests would confirm fallback behavior.
- **Build validation:** Run lint, TypeScript compilation, and the production build to ensure the new imports resolve correctly.
- **Scalability:** If the preset list grows, consider indexing by `id` for O(1) lookup.
