

packages/graph-view/src/themes/types.ts

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T19:50:55.276Z

Overview

A new file `packages/graph-view/src/themes/types.ts` (lines 1-36) adds a type-safe theme system for the graph view component.

Key changes

- `export type PresetId = ...` (lines 1-6) lists supported preset identifiers.
- `export interface AccentSwatch` (lines 8-13) defines accent color metadata.
- `export interface ThemePreset` (lines 16-22) bundles preset metadata, colors, accent swatches, and a default accent ID.
- `export type HeadingFont = "serif" | "sans" | "mono"` (line 25) restricts heading font choices.
- `export interface ThemeConfig` (lines 27-31) captures runtime theme configuration.
- `export const DEFAULT_THEME_CONFIG: ThemeConfig` (lines 33-36) provides a baseline configuration (`presetId: "dark-gold"` , `accentId: "gold"`).

Impact

- **Correctness:** Type definitions prevent misuse of preset identifiers and accent data.
- **Maintainability:** Centralized theme definitions simplify adding or updating presets.
- **Compatibility:** As a new module, it introduces no breaking changes; existing code remains unaffected unless it imports from this file.

Risks & follow-ups

- Verify that components consuming theme data import the correct types from this file.
- Ensure that preset identifiers used elsewhere match the `PresetId` union to avoid type errors.
- Run the repository's lint, test, and production build scripts to confirm no new TypeScript errors.
