

packages/graph-view/src/utils/__tests__/smoke.test.ts

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T14:54:39.932Z

Overview

A smoke-test file was added to `packages/graph-view/src/utils/__tests__/smoke.test.ts` (lines R1-R21).

It verifies that the bundled dependencies `elkjs`, `graphology`, and `graphology-communities-louvain` can be imported and used.

Key changes

- **File added:** `packages/graph-view/src/utils/__tests__/smoke.test.ts` (R1-R21).
- **Imports** (R1-R4):
 - `describe, it, expect` from `vitest`.
 - `Graph` from `graphology`.
 - `louvain` from `graphology-communities-louvain`.
 - `loadElkConstructor` from `../elk-bundled`.
- **Test suite** `dependency smoke test` (R6-R21):
 - `imports elkjs` : loads ELK asynchronously and asserts it is a function.
 - `imports graphology` : creates a `Graph`, adds a node, and checks `order === 1`.
 - `imports graphology-communities-louvain` : asserts `louvain` is a function.

Impact

- Adds early CI checks for missing or broken imports; no production code changes.
- Increases test coverage by ~21 lines with negligible runtime overhead.
- Confirms that `loadElkConstructor` resolves asynchronously and returns a usable constructor.

Risks & follow-ups

- If `loadElkConstructor` throws, the test will error; ensure the ELK bundle is available.
- The test requires `vitest`, `graphology`, and `graphology-communities-louvain` to be installed; missing packages will cause failures.
- If any dependency API changes (e.g., `Graph.order`), the test will need updating.
