

packages/graph-view/tsconfig.app.json

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T19:18:33.301Z

Overview

A new TypeScript configuration file, `packages/graph-view/tsconfig.app.json`, was added (lines 1-24). It provides a dedicated compiler configuration for the Graph View application.

Key changes

- **File added:** `packages/graph-view/tsconfig.app.json` (R1-24).
- **Compiler options** (added lines 2-6):
 - `tsBuildInfoFile`: `./node_modules/.tmp/tsconfig.app.tsBuildInfoFile`
 - `target`: `ES2020`
 - `useDefineForClassFields`: `true`
 - `lib`: `["ES2020", "DOM", "DOM.Iterable"]`
- **Module settings** (added lines 7-13):
 - `module`: `ESNext`
 - `moduleResolution`: `bundler`
 - `allowImportingTsExtensions`: `true`
 - `isolatedModules`: `true`
 - `moduleDetection`: `force`
 - `noEmit`: `true`
 - `jsx`: `react-jsx`
- **Strictness flags** (added lines 17-21):
 - `strict`, `noUnusedLocals`, `noUnusedParameters`, `noFallthroughCasesInSwitch`, `noUncheckedSideEffectImports`.
- **Source inclusion** (added line 23): `"include": ["src"]`.

Impact

- **Type-checking:** The file enables type-checking for Graph View; however, whether the build system automatically uses it is unknown from the diff.
- **Incremental builds:** `tsBuildInfoFile` points to a temporary location, which may speed subsequent compilations if writable.
- **Runtime:** `noEmit: true` means no JavaScript is produced, so existing runtime behavior is unaffected.

Risks & follow-ups

- Unknown if the Graph View build script references `packages/graph-view/tsconfig.app.json`; if not, type-checking will be skipped.
- The `./node_modules/.tmp` directory must be writable for incremental build info; this is not confirmed.

- Compatibility of `moduleResolution: bundler` with the current bundler version is unverified.
- Strict flags may surface new type-checking errors; run the Graph View test suite to detect any issues.
