

src/app/gitTypes.ts

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T19:03:40.736Z

Overview

A new file `src/app/gitTypes.ts` has been added. It declares a set of TypeScript interfaces that describe Git tooling status, GitHub authentication, repository and pull-request summaries, blame information, status files, and publish workflow data.

Key changes

- `GitToolingStatus` (lines 1-6) – captures Git availability, version, error, and GitHub auth status.
- `GithubAuthStatus` (lines 10-17) – describes authentication state, user, host, scopes, and a message.
- `GithubRepoSummary` (lines 19-28) – provides metadata for a GitHub repo (owner, name, URLs, default branch, fork flag, update time).
- `GithubPullRequestSummary` (lines 30-41) – details a PR (number, title, state, refs, author, draft flag, repo).
- `PublishPreview`, `PublishExecuteResult`, `PublishExecutePayload` (lines 91-125) – model the publish preview, execution result, and payload for the publish command.
- Additional supporting interfaces (`LocalRepoMatch`, `GitBlameOwner`, `GitBlameAtRefResult`, `GitStatusFile`, `GitRepoStatus`, `PrCompareRoots`) are also introduced.

Impact

- **Compile-time safety:** Existing code that imports these interfaces will benefit from stricter type checking.
- **API surface expansion:** New interfaces may be referenced by other modules; missing imports will surface as TypeScript errors.
- **Documentation:** The added types serve as a single source of truth for Git-related data structures, improving maintainability.
- **No runtime changes:** The file contains only type definitions, so the built JavaScript output is unaffected.

Risks & follow-ups

- **Missing imports:** Verify that modules consuming these types import from `src/app/gitTypes.ts`.
- **Property mismatches:** Ensure that any existing objects conform to the new interface shapes (e.g., `GitToolingStatus.git.gitVersion` can be `null`).
- **Build & lint:** Run `npm run lint`, `npm test`, and `npm run build` to confirm no type errors.
- **Documentation:** Update any README or API docs that reference GitHub or Git status structures to reflect the new interfaces.
