Overview

A new file `src/app/workspaceStorage.ts` (R1-R112) introduces local-storage helpers for Git user data, active workspace ID, and a local-only mode flag. It also defines the `OnboardingGate` type and provides utilities for resolving the onboarding step, merging session state, and finding a workspace by ID.

Key changes

- **Imports:** `GitUserProfile`, `NovaWorkspace`, `WorkspaceSessionState` from `./workspaceTypes` (R1).
- **Constants:** `USER_KEY`, `ACTIVE_WS_KEY`, `LOCAL_ONLY_KEY` (R3-R5).
- **Git user helpers:** `loadCachedGitUser`, `saveCachedGitUser`, `clearCachedGitUser` (R7-R25).
- **Active workspace helpers:** `loadCachedActiveWorkspaceId`, `saveCachedActiveWorkspaceId` (R27-R41).
- **Local-only mode helpers:** `loadCachedLocalOnly`, `saveCachedLocalOnly` (R45-R63).
- **Onboarding:** `OnboardingGate` type and `resolveOnboardingGate` (R43-R86).
- **Session utilities:** `mergeSession` (R88-R102).
- **Workspace lookup:** `findWorkspace` (R104-R112).

Impact

- **API surface:** Exposes a clear set of functions for caching and session handling; no existing modules are altered.
- **Error handling:** All storage accesses are wrapped in `try/catch` blocks that return safe defaults (e.g., `null` or `false`).
- **Performance:** Operations are synchronous and lightweight; `localStorage` is accessed only when needed.

Risks & follow-ups

- **Silent failures:** Catch blocks swallow errors; consider logging in development to surface storage issues.
- **Type alignment:** Verify that `GitUserProfile` and `WorkspaceSessionState` match the JSON structures stored; run TypeScript checks.
- **Onboarding logic:** Ensure `resolveOnboardingGate` prioritizes flags (`skipBoot`, `localOnlyMode`, `hasUser`, `hasActiveWorkspace`) as intended; unit tests are recommended.
- **Testing coverage:** Add tests for each helper to confirm correct serialization, error handling, and merge behavior.
