

src/components/GitBlamePanel.tsx

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T19:10:15.839Z

Overview

A new `src/components/GitBlamePanel.tsx` component is added. It renders a file list from a workspace snapshot, loads Git blame for a selected file, and displays line-by-line author attribution.

Key changes

- **Imports:** added React hooks, `lucide-react` icons, and type imports from `../app/gitTypes` and `../app/workspaceTypes` (R1-R4).
- **Props interface:** `GitBlamePanelProps` declares `repoRoot: string`, `commit: WorkspaceCommitSnapshot`, and `onClose: () => void` (R6-R9).
- **Component logic:** uses `window.electronAPI` to call `workspaceSnapshotListFiles`, `gitBlameAtRef`, and `workspaceSnapshotReadFile` (lines 13-70).
- **State & effects:** manages file list, search query, selected path, blame data, file content, loading flags, and error state (lines 14-21, 23-34, 44-70).
- **UI:** renders a searchable file list, loading indicators, blame owners, error messages, and a preformatted blame view with author badges (lines 74-158).

Impact

- Requires the Electron main process to expose `workspaceSnapshotListFiles`, `gitBlameAtRef`, and `workspaceSnapshotReadFile`; otherwise the component fails silently.
- Loads all snapshot files on mount; filtering is capped at 200 results, so large snapshots may affect initial load time.
- No new logs are added; the UI provides visual feedback for loading and errors.

Risks & follow-ups

- **API availability:** verify that the main process implements the required methods (unknown from the available diff/scan evidence).
- **Large repos:** test snapshots > 10 k files to ensure the UI remains responsive (unknown from the available diff/scan evidence).
- **Type safety:** ensure `commit.snapshotPath`, `commit.hash`, and `commit.shortHash` are defined; otherwise the component may crash (unknown from the available diff/scan evidence).
- **Image filtering:** the `.png/.jpg` exclusion logic may miss other binary assets; confirm coverage (unknown from the available diff/scan evidence).
