

src/components/GraphMetricsStrip.tsx

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T19:11:17.169Z

Overview

A new component `GraphMetricsStrip` is added at `src/components/GraphMetricsStrip.tsx`. It renders a toggleable strip that visualizes workspace metrics (change mix, depth, imports, calls) and tables for the top extensions and roots.

Key changes

- **File added:** `src/components/GraphMetricsStrip.tsx` (lines 1-134).
- **Imports** (lines 1-3): `useState` from React, `DocWorkspaceMetrics` type, and `DocMermaidMount`.
- **Props interface** (lines 5-15): `metrics`, `pieDef`, `depthDef`, `importDef`, `callDef`, `metricsChartsLoading`, `outlineLoading`, `topExtensions`, `topRoots`.
- **Component implementation** (lines 17-134):
 - Uses `useState` to track `open`.
 - Renders a button that toggles the strip (`aria-expanded={open}`).
 - When open, shows four `DocMermaidMount` charts with `definition`, `loading`, and `loadingLabel` props.
 - Displays two tables for `topExtensions` and `topRoots`.
 - Footer shows a count derived from `metrics.byKind`.
- **Styling:** relies on CSS classes such as `kg-metrics-strip`, `kg-metrics-strip-toggle`, `kg-metrics-strip-body`, `kg-metrics-charts`, and `kg-metrics-tables`.

Impact

- **No existing component is modified;** the addition is non-breaking.
- **Data contract:** callers must provide a `DocWorkspaceMetrics` object matching the expected shape; mismatches will surface at runtime.
- **Dependencies:** requires `DocMermaidMount` and the referenced CSS classes; missing assets will affect layout or chart rendering.
- **Render cost:** the strip is hidden by default, so the four Mermaid charts are only rendered after the user toggles it open.

Risks & follow-ups

- Verify that `DocMermaidMount` correctly handles the `loading` and `loadingLabel` props; otherwise charts may not appear.
- Ensure the footer's `metrics.byKind` aggregation matches the actual `metrics` structure; a mismatch will break the path count.
- Test the toggle logic for accessibility (e.g., `aria-expanded` state).

- Confirm that the CSS classes (`kg-metrics-strip` , `kg-metrics-charts` , etc.) exist in the global stylesheet; missing classes will break layout.
