

src/components/launch/LaunchBoot.tsx

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T19:30:26.917Z

Overview

A new component `LaunchBoot` is added at `src/components/launch/LaunchBoot.tsx`. It drives a multi-step startup UI that animates the logo and text before handing control to the app.

Key changes

- **Imports** (lines 1-9): React hooks, `appMark` image, launch constants (`LAUNCH_EXIT_FADE_MS` , `LAUNCH_HOLD_MS` , `LAUNCH_HOLD_SKIP_AFTER_MS`), `usePrefersReducedMotion` , and `TypewriterText` .
- **Props interface** (lines 13-16): `LaunchBootProps` with a required `onExitComplete: () => void` .
- **Component implementation** (lines 17-216):
 - State: `step` , `progress` , `canSkip` .
 - `useEffect` blocks schedule transitions using the constants above and respect the user's reduced-motion preference.
 - A global `keydown` listener allows skipping with "Enter/Space".
 - `onExitComplete` is invoked once the exit animation finishes.
 - The rendered dialog includes the logo, typewriter-styled text, a progress bar, and a skip overlay.

Impact

- Adds the image asset `nova-diff-icon.png` and the `TypewriterText` component dependency.
- Exposes a new callback contract (`onExitComplete`) that callers must provide.
- Uses `role="dialog"` and `aria-modal="true"` for accessibility.

Risks & follow-ups

- **Missing callback:** If `onExitComplete` is not supplied, the component will throw at runtime.
- **Reduced-motion path:** Verify that the component skips correctly when `usePrefersReducedMotion` returns true.
- **Asset resolution:** Confirm that `appMark` resolves in all build environments.
- **Timer cleanup:** All `useEffect` hooks include cleanup logic, but manual verification is recommended.
