

src/components/launch/launch.css

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T19:32:24.746Z

Overview

A new file `src/components/launch/launch.css` (531 lines, R1-531) was added. It defines a TRON-style launch sequence with many animations, gradients, and a reduced-motion fallback.

Key changes

- **New classes:** `.launch-boot`, `.launch-boot-grid`, `.launch-boot-scan`, `.launch-boot-frame`, `.launch-boot-logo-ring`, `.launch-boot-continue`, `.launch-boot-line-placeholder`, `.launch-boot-copy`, `.launch-boot-progress`, `.launch-boot-corners span`, `.typewriter-cursor`, and several `.app-shell` panel visibility rules.
- **Keyframe animations:** `launch-continue-in`, `launch-grid-in`, `launch-scan-sweep`, `launch-frame-in`, `launch-logo-pulse`, `typewriter-blink`, `launch-fly-left/right/up/down`, `launch-sheen`, `launch-brand-in`, `launch-chip-in`.
- **Reduced-motion media query** (`@media (prefers-reduced-motion: reduce)`) disables animations and sets opacity for non-launched panels.
- **Sidebar launch animations** for `.sidebar-feature`, `.sidebar-section`, and `.sidebar-user` with staggered delays.

Impact

- Adds CSS for the launch UI; size unknown from the diff.
- Uses `color-mix`, radial gradients, and multiple animations, which may increase GPU load during launch.
- No runtime behavior changes—only styling.

Risks & follow-ups

- **Import:** Verify that `launch.css` is imported in the launch component or global stylesheet; otherwise the UI will not appear.
- **Animation correctness:** Run smoke tests to confirm keyframes trigger and panels fade as intended.
- **Reduced-motion:** Ensure users with `prefers-reduced-motion` see the static fallback and that no animations bleed into other components.
- **Browser support:** `color-mix` and `in` syntax require modern browsers; test on Safari/Edge and consider fallbacks if needed.
