

src/components/onboarding/WorkspaceHub.tsx

Kind: added · Baseline: 8e0dc031dcfc · Target: NovaDiff · Generated: 2026-05-19T19:26:03.313Z

Overview

A new onboarding component, `WorkspaceHub`, is added at `src/components/onboarding/WorkspaceHub.tsx`. It renders a UI for listing existing workspaces, creating new ones (local folder, clone URL, or GitHub repo), and opening an existing workspace.

Key changes

- **Exports** – `WorkspaceHubProps` (lines 6-14) and `WorkspaceHub` component (lines 15-285).
- **Imports** – React hooks, Lucide icons, and types from `workspaceTypes` and `gitTypes` (lines 1-4).
- **State & callbacks** – `useState` for UI state, `useCallback` for `refreshList`, and `useEffect` hooks that subscribe to `window.electronAPI` events (lines 21-53).
- **Workspace creation** – `createWorkspace` handles three modes (`local`, `clone`, `github`) and calls `window.electronAPI.workspaceCreate` (lines 81-140).
- **Opening existing** – `openExisting` optionally calls `workspaceSetActive` (lines 144-150).
- **UI** – Tabs for mode selection, inputs for name, path, URL, or GitHub repo, and a list of workspaces (lines 152-285).

Impact

- **Correctness** – relies on `window.electronAPI` methods (`workspaceList`, `workspaceCreate`, `workspaceSetActive`, `githubListRepos`, `onWorkspaceHistoryProgress`). Missing APIs will surface as user-visible errors.
- **Maintainability** – centralizes onboarding logic; future changes to workspace creation can be made in one place.
- **Observability** – `historyMsg` and `error` UI elements expose progress and error states.
- **Compatibility** – no changes to existing components; the new file is isolated.

Risks & follow-ups

- **Electron API availability** – verify that all referenced API methods exist in every target environment.
- **GitHub repo resolution** – `resolveGithubClone` may return a remote URL; downstream logic must handle both local paths and HTTP URLs.
- **UI regressions** – test tab rendering, input behavior, and `Loader2` spinner across screen sizes.
- **Type safety** – ensure that `GitUserProfile`, `NovaWorkspace`, `WorkspaceSessionState`, and `GithubRepoSummary` are exported from their modules; otherwise TypeScript errors will appear.
