Overview

A new file, `src/components/ui/ui-transitions.css` (lines 1-120), adds CSS for overlay, panel, and view transitions. The file introduces a reduced-motion media query to disable animations when the user prefers less motion.

Key changes

- **Overlay** – `.ui-overlay` (lines 3-6) starts with `opacity: 0` and a 0.28s transition.
 - `.ui-overlay.is-open` (lines 8-10) sets `opacity: 1`.
 - `.ui-overlay.is-closing` (lines 12-15) returns to `opacity: 0` and disables pointer events.
- **Panel** – `.ui-overlay-panel` (lines 17-25) defines initial opacity, transform, blur, and a 0.32s transition.
 - `.ui-overlay-panel.is-open` (lines 27-31) restores full opacity, no transform, and no blur.
 - `.ui-overlay-panel.is-closing` (lines 33-37) reverts to reduced opacity, a slight translateY, and a 3px blur.
- **View animations** – `.ui-view-enter` (lines 39-41) and `.ui-view-fade` (lines 43-45) trigger keyframes `ui-view-enter` (lines 80-90) and `ui-view-fade` (lines 93-101).
- **Reduced-motion** – media query (lines 104-120) removes animations, sets a minimal opacity transition, and ensures open states keep full opacity.
- **Workspace helpers** – `.workspace-stage` (lines 47-54) and `.workspace-stage-inner` (lines 56-61) provide flex containers for the overlay structure.

Impact

- **UI behavior** – New transitions animate overlay panels and view entries.
- **Accessibility** – Reduced-motion handling is added; existing components are unaffected.
- **Performance** – Animations use `transform` and `filter`; impact on GPU usage is unknown from the diff.
- **Maintainability** – All new classes are prefixed with `.ui-`, reducing collision risk.

Risks & follow-ups

- Verify that `.ui-overlay` and `.ui-overlay-panel` do not clash with any pre-existing overlay implementations.
- Run smoke tests for overlay open/close flows to confirm opacity and pointer-event logic.
- Test reduced-motion preference across browsers to ensure animations are correctly disabled.

- Check that the `filter: blur` transitions do not cause layout thrashing or visual glitches on older browsers.
