Diagrams use Mermaid heuristics (imports, cross-file call guesses, type sketches). They are **not** compiler-grade call graphs. The module graph is file-to-file (JS/TS relative imports). The call graph links files when a callee name maps to exactly one definition in the repo (regex across many languages).

AI project narrative

No narrative.

Compare metrics

Auto-publish draft for 124 compared paths.

Detected stacks (marker files)

No marker-based stacks detected at repo root.

Class / symbol index (heuristic)

No symbol hints in outline.

Module import edges (tabular)

Use together with the flowchart in the Diagrams PDF for a "call graph"-style overview at module boundaries.

No resolved relative import edges.

Cross-file call edges (tabular)

Edges appear only when a call site name uniquely resolves to a single definition path (very conservative).

No unambiguous cross-file call edges (heuristic).
