Key changes

- `lastAnalyzedAt` updated to `2026-05-27T04:48:24.798Z` (previously `2026-05-26T07:21:38.024Z`).
- `gitCommitHash` updated to `984f0748954ae0907a2c9505b578119841d7fc2d` (previously `9aadd5eb56044d13c225925fc1e3ca8478099233`).

Impact

- The metadata now reflects the most recent analysis run.
- No schema changes were made; consumers of `meta.json` that rely on these fields should continue to work.

Risks & follow-ups

- **Regression risk:** If any logic hard-codes the old timestamp or commit hash, it may misbehave.
- **Test coverage:** Run the targeted unit tests that assert on `meta.json` contents and perform a quick smoke test of the analysis pipeline to confirm acceptance of the new values.
- **Documentation:** If the commit hash is referenced elsewhere, verify that references are updated accordingly.
