

packages/graph-view/src/EmbedGraphPanel.tsx

Kind: modified · Baseline: 984f0748954a · Target: NovaDiff · Generated: 2026-05-27T05:56:04.817Z

Overview

`EmbedGraphPanel` now adapts its theme to the user's system color-scheme. The component imports `resolveNovaDiffEmbedTheme` (R12), stores the resolved theme in state (`embedTheme`, R84), and updates it on mount and whenever the `prefers-color-scheme` media query changes (R86-R95). The `ThemeProvider` now receives this dynamic theme (`metaTheme={embedTheme}`, R98) instead of a static `null` value (L85 removed).

Key changes

- **Import added:** `resolveNovaDiffEmbedTheme` from `./themes/novadiffEmbed` (R12).
- **State introduced:** `embedTheme` initialized with `resolveNovaDiffEmbedTheme` (R84).
- **Effect added:** listens to `prefers-color-scheme` changes, calling `resolveNovaDiffEmbedTheme()` and updating `embedTheme` (R86-R95).
- **ThemeProvider updated:** `metaTheme` now receives `embedTheme` (R98).
- **Legacy metaTheme removed:** the previous `metaTheme={null}` line (L85) is gone.

Impact

The graph panel will now automatically switch between light and dark NovaDiff themes in response to the user's system preference, improving visual consistency across the application.

Risks & follow-ups

- **Browser support:** The code guards against missing `window.matchMedia`, so no runtime error is expected.
- **Testing:** Verify that the theme updates correctly when toggling the system color scheme and that the graph renders with the new theme.
- **Future maintenance:** Ensure `resolveNovaDiffEmbedTheme` remains up-to-date with any theme changes.
