

packages/graph-view/src/index.css

Kind: modified · Baseline: 984f0748954a · Target: NovaDiff · Generated: 2026-05-27T05:56:51.766Z

Overview

The `index.css` for the graph-view package has been extended to support a `*liquid-glass`

- UI mode and to tighten the styling of the embedded NovaDiff graph. New rules remove background paints from React-Flow elements, adjust edge and node layering, and refine the minimap and control panel layout.

Key changes

- **Liquid-glass mode** (`html.app-liquid-glass` selectors) now clears background, color, image, and shadow on all major graph containers (`.novadiff-graph-explorer-root` , `.novadiff-graph-theme-host` , `.embed-graph-flow-host` , etc.) and on React-Flow canvas elements (`.react-flow__background` , `.react-flow__pane` , `.react-flow__viewport` , `.react-flow__minimap`).
- **Edge visibility:** `.novadiff-graph-embed .react-flow__edges` gets `z-index: 10` to stay above container panels; edge paths are styled with a subtle blue stroke (`rgba(56,217,255,0.42)`).
- ****Node**
