

packages/graph-view/src/themes/novadiffEmbed.ts

Kind: modified · Baseline: 984f0748954a · Target: NovaDiff · Generated: 2026-05-27T06:00:24.606Z

Overview

`packages/graph-view/src/themes/novadiffEmbed.ts` replaces the static export `NOVADIFF_EMBED_THEME` (lines 3-4) with a runtime resolver `resolveNovaDiffEmbedTheme`. The resolver selects a dark or light theme based on the browser's `prefers-color-scheme` media query, defaulting to the dark theme when the query is unavailable.

Key changes

- Removed the exported constant `NOVADIFF_EMBED_THEME`.
- Added `EMBED_DARK_THEME` (lines 3-7) and `EMBED_LIGHT_THEME` (lines 9-13).
 - Dark theme: `presetId: "dark-ocean", accentId: "purple", headingFont: "sans"`.
 - Light theme: `presetId: "light-minimal", accentId: "ocean", headingFont: "sans"`.
- Introduced export function `resolveNovaDiffEmbedTheme(): ThemeConfig` (lines 19-26) that returns the appropriate theme.
- Updated the comment block (lines 15-18) to describe dynamic resolution.
- The file now exposes only the resolver function.

Impact

- **Breaking change:** Imports of `NOVADIFF_EMBED_THEME` will fail; callers must use `resolveNovaDiffEmbedTheme()`.
- **Runtime behavior:** Theme selection adapts to the user's OS/browser color scheme via `window.matchMedia("(prefers-color-scheme: light)")`.
- **Fallback:** If `window.matchMedia` is unavailable, the function returns the dark theme.
- **Performance:** A single `matchMedia` call per resolution; negligible overhead.
- **Testing:** Tests that relied on the static theme may need to be updated to account for the dynamic resolver.

Risks & follow-ups

- Search the codebase for `NOVADIFF_EMBED_THEME` imports and replace them with calls to `resolveNovaDiffEmbedTheme()`.
- Verify that any documentation or README references to the old constant are updated.
- Ensure target browsers support `window.matchMedia`; the fallback covers missing support.
