

src/App.css

Kind: modified · Baseline: 984f0748954a · Target: NovaDiff · Generated: 2026-05-27T05:21:55.186Z

Overview

`src/App.css` now contains a liquid-glass theme. The diff adds 104 lines (R130-195) that set the app background to transparent and introduce a macOS-style drag region. A light-mode media query (R2929-2966) is also added.

Key changes

- **Liquid-glass theme** (R130-195)
 - `html.app-liquid-glass` and `html.app-liquid-glass body` set `background: transparent;`
 - `.app-root--liquid-glass` defines `--mac-liquid-drag-height: 34px;`
- **Light-mode media query** (R2929-2966)
 - Adds a `prefers-color-scheme: light` query that introduces new CSS variables for the graph shell.
- No other sections of the file were modified.

Impact

Adding the `app-liquid-glass` class enables a glass-like UI overlay with a transparent background and a draggable area. The light-mode media query provides a consistent appearance when the system prefers a light color scheme. Existing functionality should remain unchanged.

Risks & follow-ups

- Verify that the transparent background does not reduce readability for all content.
- Run targeted tests for the drag region and window-chrome hiding to confirm macOS compatibility.
- Ensure the new CSS variables do not conflict with other theme overrides.
