

src/components/CodeMapLoadingPreview.css

Kind: modified · Baseline: 984f0748954a · Target: NovaDiff · Generated: 2026-05-27T05:54:03.044Z

Overview

A new light-mode media query was added to `src/components/CodeMapLoadingPreview.css` (lines 269-371). It replaces the dark-theme palette with lighter colors and adjusts gradients, shadows, and borders for the code-map loading preview.

Key changes

- **Media query:** `@media (prefers-color-scheme: light)` (lines 269-371).
- `.code-map-loading-preview` background changed from `#04080e` to `#edf4fd`.
- Gradient backgrounds for `__viewport::after`, `__stars`, `__horizon`, `__mesh`, and `__console` updated to use lighter accent colors (`#0da7d7`, `#00b9db`, `#edf4fd`).
- Shadows and opacities adjusted: e.g., `__horizon` opacity set to `0.72`; `__mesh` box-shadow reduced.
- Text colors for `__title`, `__track-label`, `__track-pct`, and `__track-detail` changed to lighter hues (`#10233a`, `#12314a`, `#47647f`).
- Special handling for macOS liquid-glass hosts (lines 355-371): hides backdrop plates/gradients and sets transparent backgrounds for the preview and its subcomponents.

Impact

- **Visual:** The loader preview now displays with a light-mode palette; contrast ratios may differ from the dark theme.
- **Testing:** Any tests that assert specific color values or background images will need updates to match the new light-mode styles.
- **Maintainability:** The new media query block keeps dark-theme logic untouched while adding a dedicated light-mode override.
- **Runtime:** No JavaScript changes; purely CSS, so no impact on other components.

Risks & follow-ups

- **Dark-mode leakage:** Verify that the new styles do not affect dark-theme contexts.
- **Accessibility:** Run a WCAG audit to confirm that the new colors meet contrast requirements.
- **Liquid-glass interaction:** Ensure that the `html.app-liquid-glass` overrides do not unintentionally affect unrelated components.
- **Test failures:** Update any snapshot or color-assertion tests that reference the old dark-theme values.
