

electron/workspace-store.cjs

Kind: modified · Baseline: 46a8da0664d1 · Target: NovaDiff · Generated: 2026-05-19T22:38:32.561Z

Overview

A new helper `updateWorkspaceUiState` was added to `electron/workspace-store.cjs`. It updates a workspace's UI state, persists the change to the workspace's `meta.json`, and returns the updated session.

Key changes

- **New function** `updateWorkspaceUiState(userData, workspaceId, uiState)` (lines 108-126).
 - Loads the session (`await loadSession(userData)` – R109).
 - Finds the workspace by ID (`findIndex` – R110).
 - Throws `new Error("Workspace not found")` if missing (R111-112).
 - Merges existing `uiState` with the supplied payload (R114-116).
 - Updates `updatedAt` and writes the workspace back to `meta.json` (`writeJson(path.join(session.workspaces[idx].dataDir, "meta.json"), session.workspaces[idx])` – R120-123).
 - Returns the session (R124-125).
- **Export update:** `updateWorkspaceUiState` is now part of `module.exports` (line 191).
- No other logic changes; functions such as `createWorkspace` and `updateWorkspaceLiveRepo` remain unchanged.

Impact

- **Correctness:** Guarantees UI state persistence and timestamping; throws a clear error when the workspace ID is invalid.
- **Maintainability:** Centralizes UI state handling, reducing duplication.
- **Performance:** Adds one `writeJson` call per UI update; overhead is negligible for typical usage.
- **Compatibility:** No breaking changes; the new export is additive.

Risks & follow-ups

- **Regression:** Verify that callers still work after the export change; run the full test suite.
- **Data integrity:** Ensure `writeJson` merges `uiState` without overwriting unrelated fields in `meta.json`.
- **Concurrency:** Multiple simultaneous UI updates will race; the last write wins. Consider locking if needed.
- **Documentation:** Update public docs or type definitions to expose `updateWorkspaceUiState`.
