

packages/graph-view/src/EmbedDashboardPanel.tsx

Kind: added · Baseline: 46a8da0664d1 · Target: NovaDiff · Generated: 2026-05-19T22:47:21.829Z

Overview

Adds a new embeddable dashboard panel component (`EmbedDashboardPanel`) with full chrome and project-wide class depth to `packages/graph-view/src` .

Key changes

- **Imports:** React hooks, `ReactFlowProvider` , `@xyflow/react` CSS, `GraphIssue` type, `DashboardContent` , `useDashboardStore` , `ThemeProvider` , and `NOVADIFF_EMBED_THEME` .
- `FlowDimensions` type and `** EmbedSizedDashboard *`
- component that uses a `ResizeObserver` to set the pane's width/height.
- `EmbedDashboardPanelProps` interface exposing optional `accessToken` and `graphIssues` .
- `EmbedDashboardPanel` pulls `graph` from the store, wraps content in `ThemeProvider` with `NOVADIFF_EMBED_THEME` , and conditionally renders the sized dashboard or a "Preparing graph..." overlay.
- Default values: `accessToken="__novadiff__"` and `graphIssues=[]` .

Impact

- Global CSS import `@xyflow/react/dist/style.css` may interfere with existing styles.
- `ResizeObserver` usage could affect performance or require a polyfill on older browsers.
- The placeholder `accessToken` must be overridden for authenticated usage; otherwise requests may fail or expose data.
- Component depends on `useDashboardStore` ; it will error if rendered outside the store provider.
- New public surface requires documentation and tests to cover its API and rendering behavior.

Risks & follow-ups

- `**Style conflicts`
