

packages/graph-view/src/components/Breadcrumb.tsx

Kind: modified · Baseline: 46a8da0664d1 · Target: NovaDiff · Generated: 2026-05-19T22:51:22.239Z

Overview

The `Breadcrumb` component in `packages/graph-view/src/components/Breadcrumb.tsx` has been updated to centralize active-layer resolution and add a navigation path for the NovaDiff embed depth. The inline lookup for the active layer has been replaced with a helper, and the click logic now distinguishes project-wide layers.

Key changes

- **Import added** (R3): `import { PROJECT_WIDE_LAYER_ID, resolveActiveLayer } from "../utils/activeLayer";`
- **New state** (R10): `const enterNovaDiffEmbedDepth = useDashboardStore((s) => s.enterNovaDiffEmbedDepth);`
- **Active layer logic** (R13-15): ````ts const activeLayer = graph && activeLayerId ? resolveActiveLayer(graph, activeLayerId) : null; const isProjectWide = activeLayerId === PROJECT_WIDE_LAYER_ID;`

```The previous lookup ( L11 ) was removed.

- **Button click** ( R28 ): `onClick={() => (isProjectWide ? navigateToOverview() : enterNovaDiffEmbedDepth())}` – the old `onClick={navigateToOverview}` ( L24 ) was removed.
- **Display text** ( R35 ): shows `"All layers · Classes"` when `isProjectWide`, otherwise the layer name ( `activeLayer?.name ?? t.layer.defaultName` ).
- **Removed**: the old `activeLayer` lookup and its JSX usage ( L11 , L31 ).

### Impact

- **Consistency**: Active-layer resolution is now handled by a single helper, reducing the risk of stale graph lookups.
- **Maintainability**: Logic is moved out of the component, simplifying future changes.
- **UI behavior**: The breadcrumb now displays a distinct label for project-wide layers and routes correctly to the overview or NovaDiff embed depth.

### Risks & follow-ups

- Verify that `resolveActiveLayer` correctly handles `undefined` graphs and returns `null` when appropriate.
- Ensure `PROJECT_WIDE_LAYER_ID` matches the value used elsewhere in the application.
- Confirm that `enterNovaDiffEmbedDepth` exists in the dashboard store and behaves as expected.

- Run UI tests to check that the "All layers · Classes" label appears only for project-wide layers.
