

## packages/graph-view/src/index.css

Kind: modified · Baseline: 46a8da0664d1 · Target: NovaDiff · Generated: 2026-05-19T22:48:48.420Z

### Overview

`packages/graph-view/src/index.css` now defines legacy gold color aliases, hides the noise-grain overlay for NovaDiff embeds, and removes several React-Flow styling rules that were previously applied only in the embedded context.

### Key changes

- **Gold aliases** added at lines 15-18: ```css --color-gold: var(--color-accent); --color-gold-dim: var(--color-accent-dim); --color-gold-bright: var(--color-accent-bright);`
- ```- **Noise overlay**` for embeds is now hidden: the comment at line 125 is replaced by a new comment at line 130, and the `.novadiff-graph-embed.noise-overlay::before` block (lines 126-128) is removed and replaced with `display: none` at line 132.
- **React-Flow canvas overrides:** the comment at line 253 ("Override React Flow dark theme") is removed, and a new comment at line 265 ("Override React Flow canvas") is added.
- **Embedded-specific React-Flow styles** (background pattern, edges, node container, controls, minimap) are all removed (lines 270-315).

### Impact

- Embedded graphs no longer show film-grain noise, matching the host's clean surface.
- Removing unused React-Flow rules for embeds reduces stylesheet size and selector conflicts.
- Gold aliases centralize color mapping, easing future theme updates.

### Risks & follow-ups

- Verify that the hidden noise overlay does not break any legacy tests that expect the overlay in embedded mode.
- Ensure that removing React-Flow edge/background styles does not affect edge visibility or interaction in the embedded explorer.
- Run the `graph-view` smoke test in NovaDiff to confirm that the new gold aliases render correctly.
- Check that the new comment for "Override React Flow canvas" does not conflict with future canvas-specific overrides.
